

WATER-SLIDE INK-JET DECAL PAPER

Make your own decals using your personal computer and inkjet printer at home. The decals can be used on ceramic, glass, metal, soap and candles.

Weight: 170gsm Size: A4 Colour: Clear

HOW to Use

- 1) Create or obtain your artwork/design. Designs can be created with any graphic software programme.

Print the design on the glossy side of the decal paper. There is no need to adjust the printer settings. Decal Paper does not need a lot of ink.

Leave the printed paper to dry for at least 30 minutes

- 2) Coat the printed paper with a clear acrylic spray. Apply 2 to 3 coats to obtain a clear shiny finish on the paper. This will ensure the ink is sealed on the paper. Allow half to one hour to dry and set.

- 3) Once dry, the design or image can be cut using a sharp pair of scissors or craft knife.

- 4) After the decal has been cut from the sheet, place into a bowl or cup of clean water for approximately 30 seconds.

- 5) When the decal film begins to slip from the backing paper, it is ready to apply to your object.

Slip a small amount of the decal from the backing to the object, then gently remove the backing paper while applying the film to the object you are decorating.
